What if you could see everything?

From the sweeping big picture to the smallest speck of data? What if you could watch a drop of fuel travel through your entire system and have instant access to every detail along the way? What if you were able to detect leaks, quickly spot fraud or theft, and be alerted when meters became uncalibrated faster than ever before? What if all the information you need to meticulously manage your inventory and facilities was always right at your fingertips? **Well then you’d increase efficiency, decrease waste, reduce overhead, and improve profitability. That’s what.**

Introducing ClearView™ Wetstock Management Services

Now you can see everything, know every detail, and have complete, nearly effortless insight into your inventory and facilities.

The ClearView solution harnesses the immense power of technology to replace estimating and uncertainty with data and answers.

This advanced, automated suite of services gives you an unprecedented level of insight, visibility, and understanding.

The ClearView solution puts an entire world of valuable, money-saving information right at your fingertips.

With the ClearView solution, you can see everything you need to reduce costs, drive down losses, gain peace of mind, maximize return on investment, and grow your business.

Your inventory is the lifeblood of your business. Ultimately, your success depends on the shrewd management of your liquid assets from delivery to dispensing. But before you make an investment in wetstock management technology, you want to make sure it’s worth it.

Think about it: Where are the weak points in your system? What are the biggest threats to efficiency and profitability? Leaks. Theft. Uncalibrated meters. And what about the cost of manually managing and servicing your system? These costs, these concerns, these weak points can essentially be eliminated by the ClearView solution.

What's more, the ClearView solution gives you the visibility and data you need to significantly reduce costs and increase profitability in other areas of your business, such as better working capital management through reduced stock holdings. Or improved sales thanks to faster responses to faulty dispensers and automatic tank gauge (ATG) equipment.

The financial impact of the ClearView solution is immediate, far-reaching, significant, and well worth the investment.

A Clear Financial Impact

Think about it: Where are the weak points in your system? What are the biggest threats to efficiency and profitability? Leaks. Theft. Uncalibrated meters. And what about the cost of manually managing and servicing your system? These costs, these concerns, these weak points can essentially be eliminated by the ClearView solution.

What's more, the ClearView solution gives you the visibility and data you need to significantly reduce costs and increase profitability in other areas of your business, such as better working capital management through reduced stock holdings. Or improved sales thanks to faster responses to faulty dispensers and automatic tank gauge (ATG) equipment.

The financial impact of the ClearView solution is immediate, far-reaching, significant, and well worth the investment.
The ClearView solution gives you access to real-time information and the ability to produce detailed system-wide reports. It alerts you to leaks, reconciles deliveries, monitors meter calibration, and the list goes on.

**Sounds like it's a pretty complicated system.**
One that’s difficult to deploy, challenging to learn, and time-consuming to use.

**Nothing could be further from the truth.**
- Its color touchscreen user interface is sleek, simple, and easy to understand.
- Web-based connectivity allows for remote management, monitoring, and support and eliminates the need for costly technician dispatches for reprogramming or diagnostics.
- The system delivers detailed alerts right to your email.
- Even the hardware is streamlined, simplified, yet very sensitive and accurate.
- The full-featured ATG utilizes ultrasonic technology on sensors and probes to deliver super-detailed, accurate information with lower maintenance costs and fewer false alerts. It features phase sensing, liquid sensing, discriminating, and can also detect leaks in the interstitial areas of tanks.
- The system’s multiplex probe and sensor wires mean only one home run is required and allows for easy, affordable retrofits. And no additional equipment or system upgrades are necessary for deployment.

Simply put, the ClearView solution harnesses the power of technology to get you the vital information you need faster and easier than you ever imagined.
The Choice Is Yours

There’s no one-size-fits-all when it comes to inventory and facilities management. Everyone has different needs and objectives which is why there are four different configurations of the ClearView solution. So you can choose the one that’s right for your business, your budget, and your bottom line.

1. **ClearView powered by Simmons**
   **Platinum**
   If you want it all—all the visibility, all the data, all the alerts, all the bells and whistles—then Platinum is for you.

   This comprehensive, top-of-the-line system delivers real-time wetstock management plus meter drift analysis by nozzle. You’ll know exactly which meters are out of calibration, saving money on service calls as the service technician doesn’t have to recalibrate all the meters. And, as you are well aware, this reduction in downtime for servicing ultimately translates into more sales for your business.

   With real-time wetstock management and monitoring you know immediately when there are wetstock issues, allowing you to address delivery discrepancies and leaks faster to reduce losses. This ability to act quickly can also help ameliorate the environmental impact of leaks, thus reducing repair and remediation costs, fees, and wetstock leak insurance premiums.

   The Platinum configuration also features the most advanced fuel management information and reporting functionality. And this money-saving, efficiency enhancing system requires no equipment or fuel system upgrades.

2. **ClearView powered by Simmons**
   **Gold**
   Real-time wetstock management is the key feature of the Gold package, as it facilitates a rapid response to delivery and leakage issues, reducing losses and the associated expenses. This level allows for intra-day reconciliation through the trading day to rapidly identify issues.

   The Gold configuration also provides an unprecedented level of product management, and the corresponding data and reporting capabilities you need to perform a wide range of detailed analyses. Like Platinum, no additional equipment or system upgrades are necessary.
The fast delivery of wetstock information and data provided by the ATG on-site and environmental monitoring allows for the quick identification and response to delivery, leak, and theft issues, reducing costs and liability. This level of service provides reconciliation on a daily basis to identify potential issues at the site.

As with all ClearView solutions, no system upgrades or additional equipment is needed to deploy the system.

With the Bronze configuration, you’ll benefit from basic Statistic Inventory Reconciliation (SIR) for cost-effective leak detection for underground storage tanks and lines.

Automated SIR lowers administrative costs, improves fuel management, reduces your environmental risk profile, and requires no equipment or fuel system upgrades.
Gone are the days of guessing, estimating, or manually measuring. Gone are the days of worrying about leaks, theft, fees, and liability. With ClearView powered by Simmons, you can take complete control of your inventory and facilities.

You can get the information and insight you need to reduce loss, save on administrative costs, improve inventory management, minimize downtime, and improve profitability.

You can see everything.
