WAYNE HELIX™ 4000 AND 5000 FUEL DISPENSERS

# Redesigned for superior performance

## You spoke. We listened.

Dover Fueling Solutions' Wayne Helix™ fuel dispenser line was designed specifically with station owners in mind. Now it's been redesigned for them, too. With several key upgrades based on feedback from customers around the world, the new and improved Wayne Helix 4000 and 5000 dispensers improve on our industry-leading design to give customers even more of what they want—including greater durability, easier serviceability, and better performance.

## More Streamlined, Inside and Out

The Wayne Helix 4000 and 5000 fuel dispensers have been reimagined from top-to-bottom. Featuring a streamlined, user-friendly design, the dispensers boast greater modularity for maximum convenience and efficiency along with an unparalleled attention to detail. Inside and out, the Helix 4000 and 5000 dispensers maintain improvements that give them a cleaner, more modern look while improving everyday operation, value, and serviceability.

## New Features and Upgrade Highlights

- **Engineered for Maximum Durability.** With more metal and less plastic, the new dispensers are built to withstand heavy use in the forecourt environment. Chemically treated glass means screens are more resistant to scratching, cracking, and breakage, ensuring long life and maximum durability. It's the perfect balance of strong and sleek, rugged and reliable.
- **Easier Serviceability.** A new swing door provides quick, direct access to lower electronic components, making it easier and faster than ever to replace the SPM, card reader, and Wayne TAP™ contactless/NFC reader when necessary.
- **Improved Protection.** Designed, tested, and proven to resist hard rain and other extreme weather conditions, so interior and exterior electronic parts maintain longer life and better protection against the elements.
- **Streamlined Design.** The sleek capacitive touch display features electronic on-screen buttons. These replace physical, mechanical buttons for a clean, modern look that helps reduce the risk of broken parts.
- **Optimized for Suction.** Reduced vibration and noise in suction environments creates a quieter, more satisfying customer experience—along with greater dependability and convenience.

### See for yourself

We created a series of videos highlighting the Helix 4000 and 5000 dispensers' new features and the rigorous testing we put them through. Visit [www.wayne.com/HelixTesting](http://www.wayne.com/HelixTesting) to see how our improved dispensers can withstand everything you and Mother Nature throw at them.
